Manufacturing of shoes and sandals

Manufacturing and sale of shoes that pursue ease of walking and design

Strength

Developing from lasts by prioritizing foot protection

They focus on functionality from the Japanese traditional footwear geta with the modern design which is Re:geTA's feature as well. Toes are moderately curved making it easy to walk. Originally this warping is the technology for people having difficulties with walking and it can get drive without bending legs hard. Such "Moving forward using the principle of leverage

is a common feature of geta.", the president Takamoto explains. Also, they think that "protecting feet" is important role of shoes so they develop products from the process of scraping lasts. And they also adopted design to not spoil functionality such as having room for the toes, placing hook and loop fasteners and belts to let insoles and foot soles stick to each other.
